## VesiVax<sup>®</sup> TLR0 CALV Kit

\$250.00

The VesiVax<sup>®</sup> TLR0 Conjugatable Adjuvant Lipid Vesicles kit is designed to provide vaccinologists and immunologists access to a TLR agonist-free, VesiVax<sup>®</sup> system. The VesiVax<sup>®</sup> TLR0 conjugatable liposome contains maleimide groups on the outer surface that allow covalent conjugation with sulfhydryl-containing molecules (e.g., cysteine group on peptides). Maleimides react with sulfhydryl groups to form stable thioether bonds. The optimal pH for the reaction is at pH 7.0. The VesiVax<sup>®</sup> TLR0 kit allows the user to covalently conjugate the desired target antigen for an easy to use antigen delivery method.
